

wind_debris

Location: planning\wind_debris

Description

The wind-borne debris region within one mile of Gulf coast along most of Bay County, affecting window protection per new Florida Building Code effective January 1, 2002. Does not include Tyndall AFB, nor Shell Island. This layer has polygon features.

For the coastal construction control line, see **cccl**.

For wind speed regions, see **wind_regions**.

For wind-load exposure categories, see **wind_expos**.

Coordinate system: State Plane, Florida North Zone, Datum NAD83, feet (see **.prj** file)

Source

In August 2001, Bay County GIS staff created this layer for Bay County Builders Services. In ArcGIS using 1999 aerial photos, the shoreline of the coastline was digitized (heads-up). This line was then offset one mile and combined with the **county** boundary to create the wind-borne debris region. The coverage was then converted to a shapefile.

In April 2004, Bay County GIS staff updated this layer for Bay County Builders Services. In ArcGIS using 2003 aerial photos, the shoreline of the coastline was digitized (heads-up). This line was then offset one mile to create the wind-borne debris region.

This data is for general graphic-display purposes at 1:24,000 scale.

This layer is based on the most current data available. Coastline has changed since 2003 aerial photos. Where accuracy is important, a licensed surveyor should determine the exact distance from the coastline. For details on use of this layer, contact Bay County Builders Services 850-784-6121.

This data is provided with the understanding that the conclusions drawn from such information are solely the responsibilities of the user. The GIS data is not a legal representation of the features depicted, and any assumption of the legal status of this data is hereby disclaimed. Errors or omissions should be reported to the Bay County GIS Division 850-784-6171.
